

■ Reporte Consolidado de Estrategias de Trading

Fecha de generación: 2026-06-06 19:54:02
Autor: David Santiago Figueroa Mendoza

■ Resultados por Estrategia

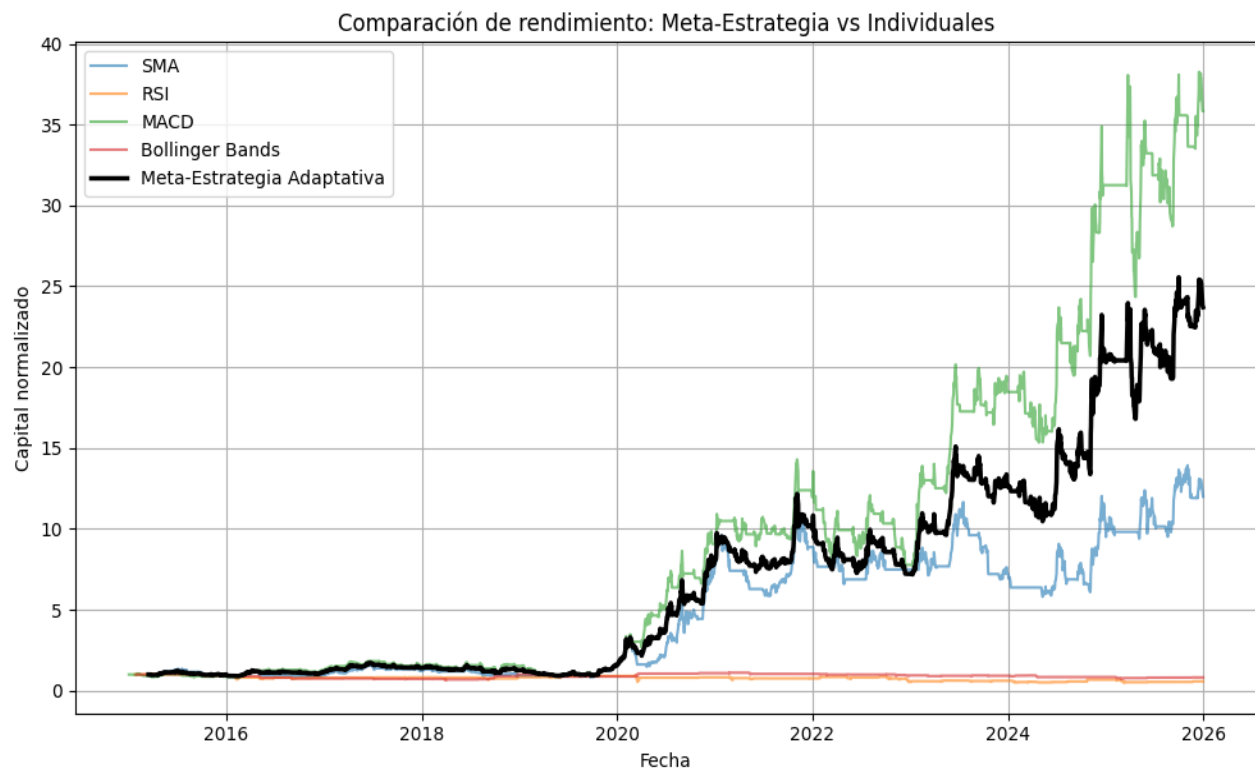

Estrategia	Final Equity	CAGR	Sharpe	Max Drawdown
SMA	\$119,994.22	25.93%	0.76	-55.50%
RSI	\$5,780.82	-4.90%	-0.08	-52.66%
MACD	\$358,363.11	38.57%	1.01	-53.03%
Bollinger Bands	\$8,203.03	-1.80%	-0.07	-36.29%
	\$23.71	34.14%	1.00	-46.24%

■■ Resumen de Análisis de Riesgo (Monte Carlo & VaR)

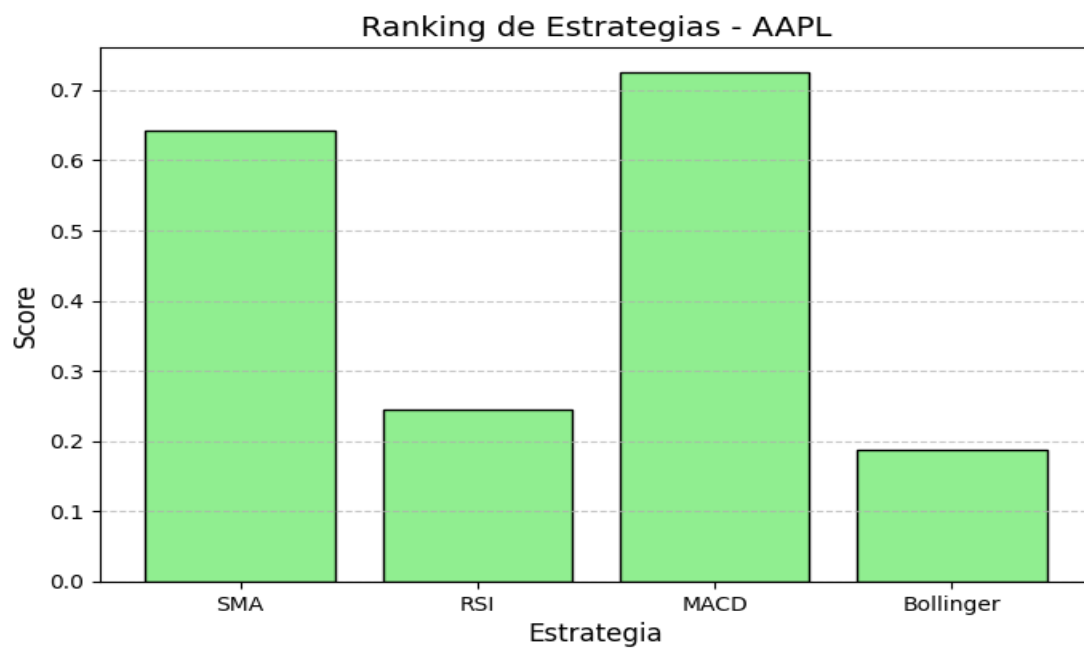

Métrica	Valor
Media final	\$539,331.31
Mediana	\$499,894.91
Probabilidad de ganancia	78.20%
VaR 95%	\$-0.04
ES 95%	\$-0.06

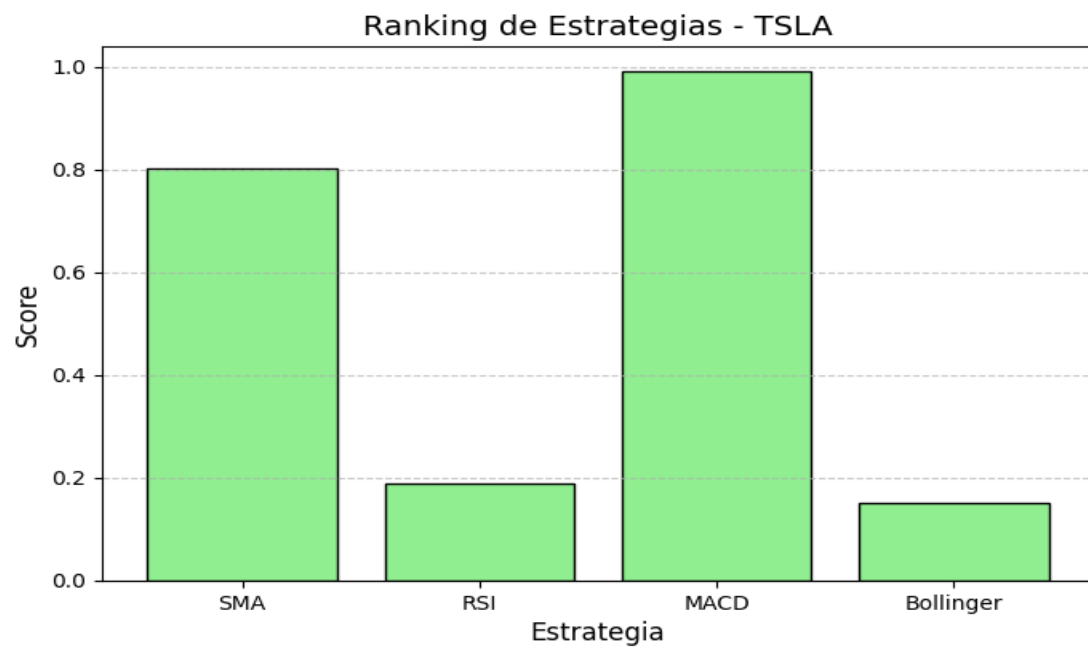

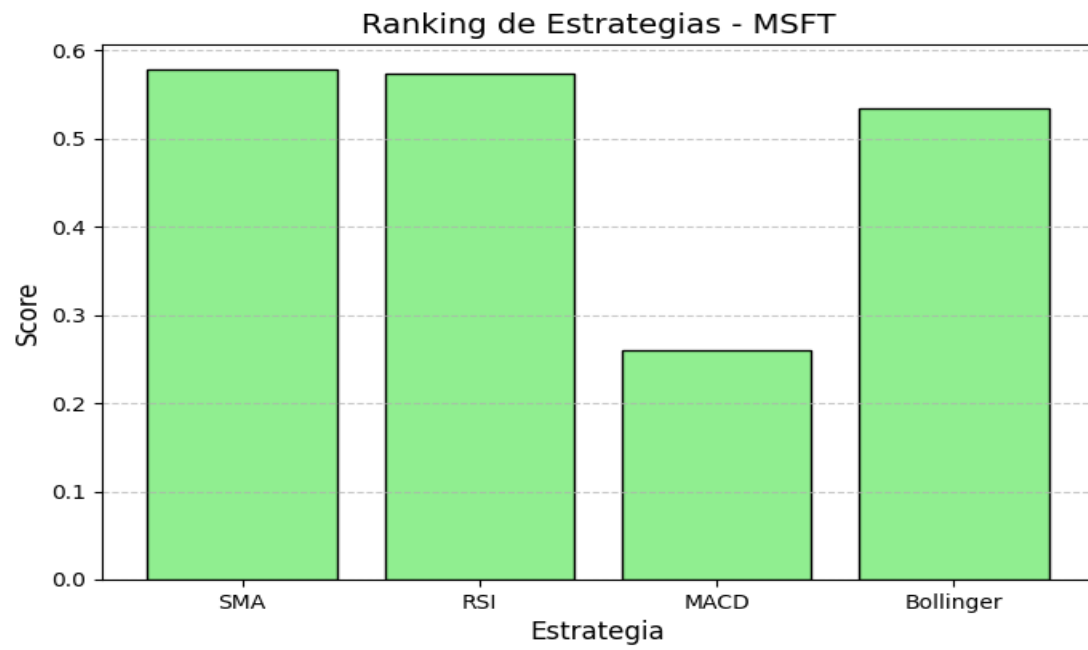

Meta-Estrategia Adaptativa

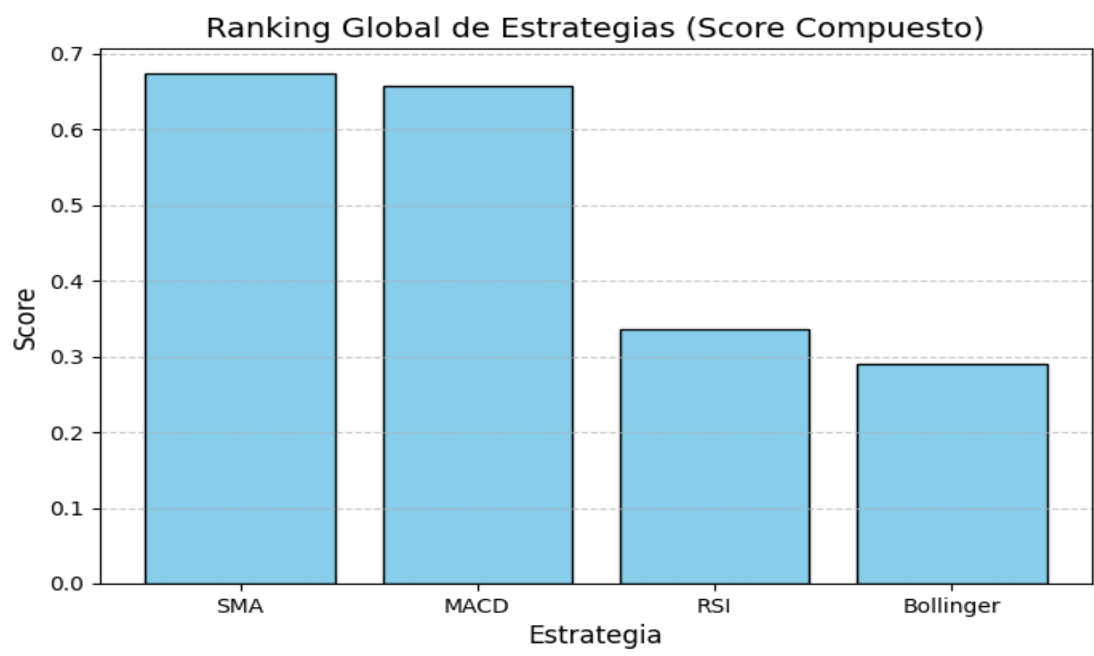

Compara el rendimiento de la Meta-Estrategia Adaptativa con las estrategias individuales. Los pesos se ajustan dinámicamente según Sharpe Ratio, CAGR y Drawdown promedio.

Heatmaps de Optimización (sharpe_ratio)

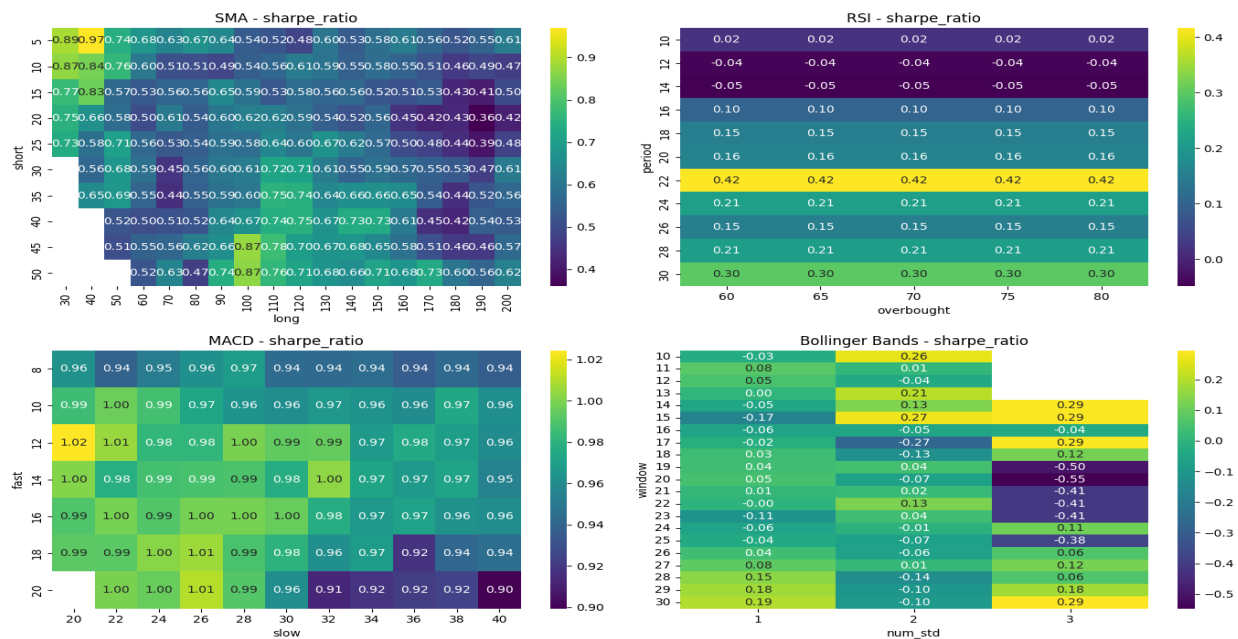

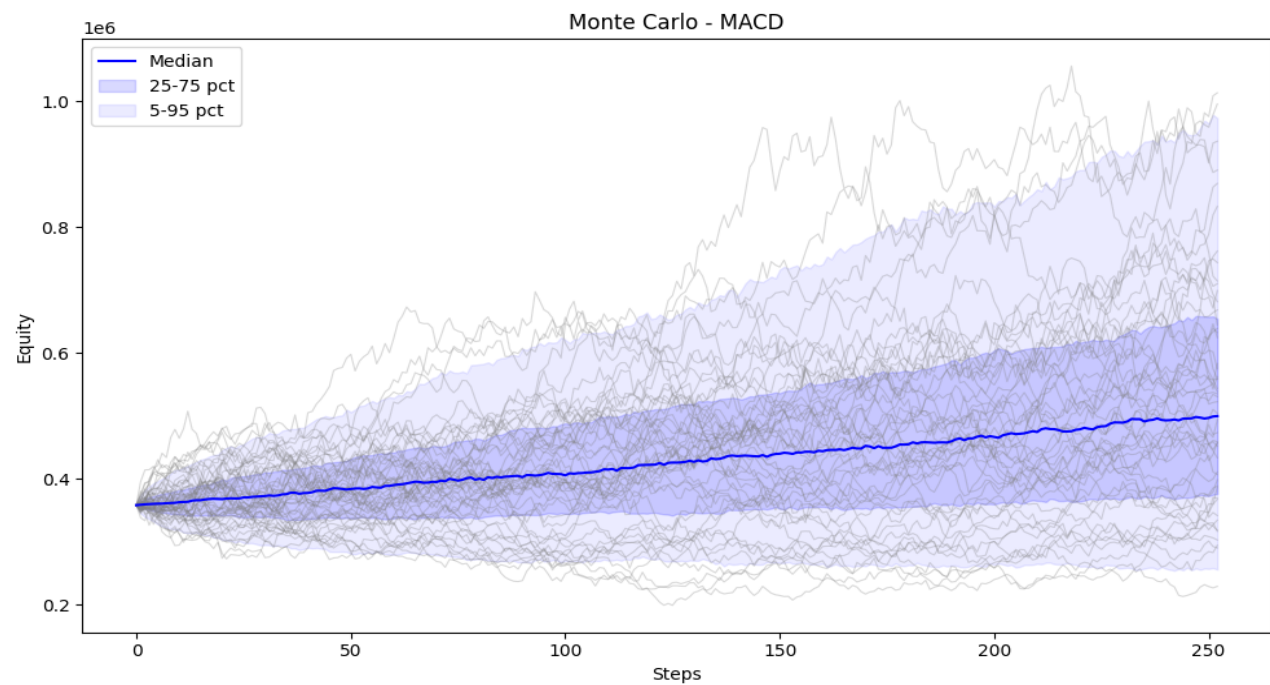

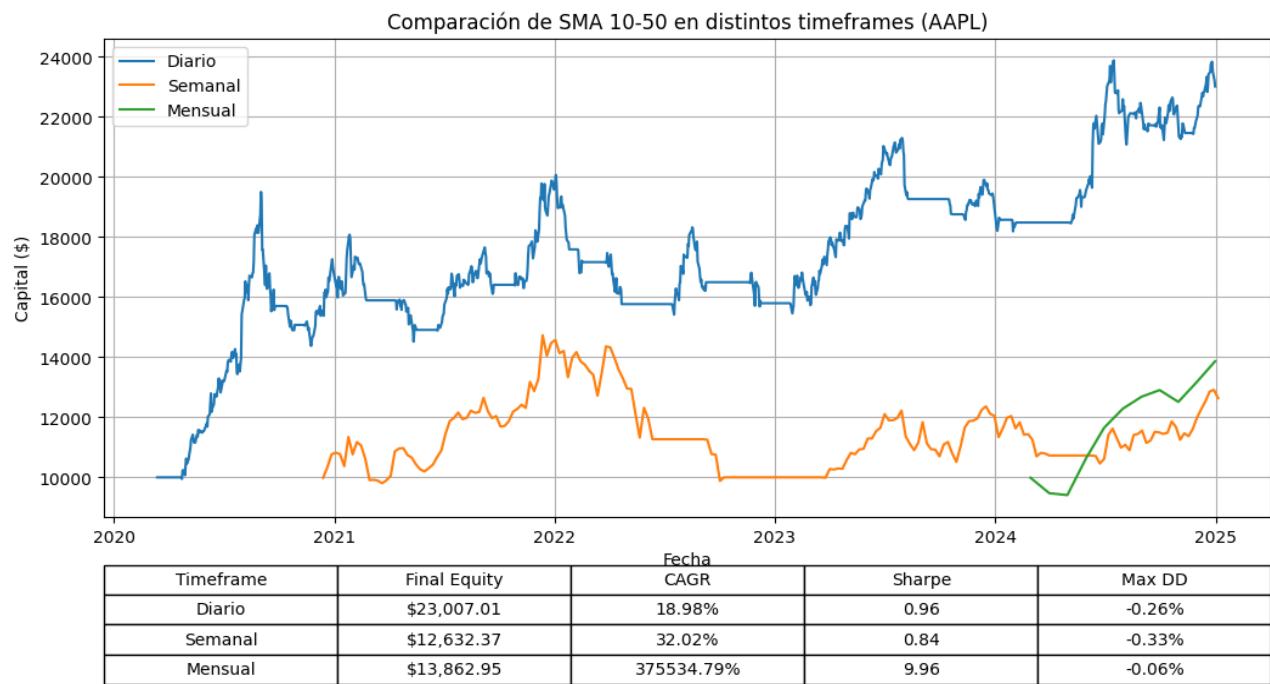

Figura 1. Heatmap comparativo de desempeño entre parámetros o estrategias.

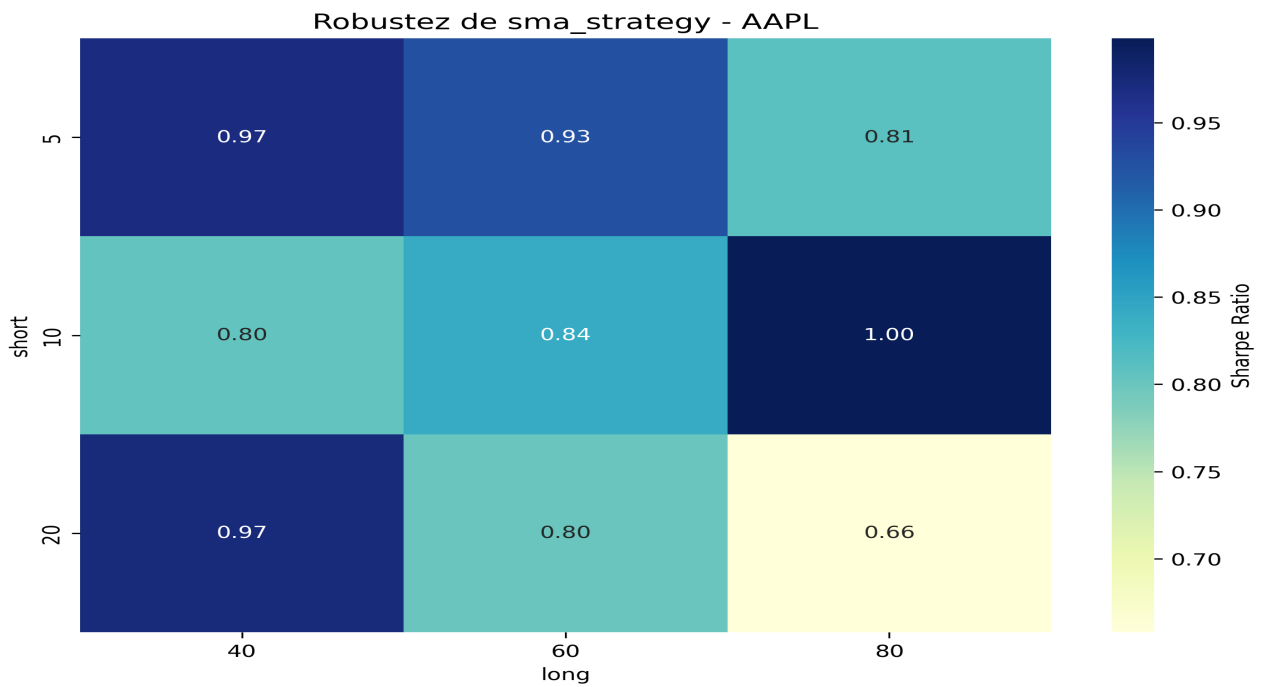

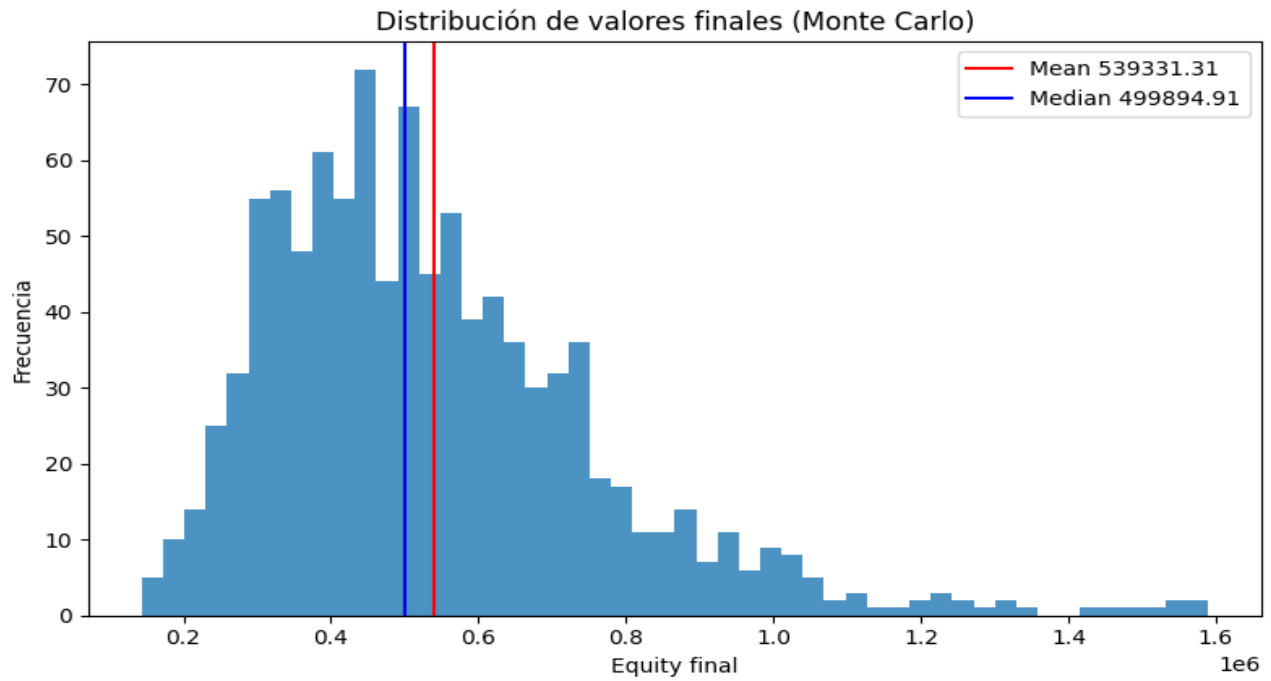

Figura 2. Análisis de robustez de la estrategia SMA.

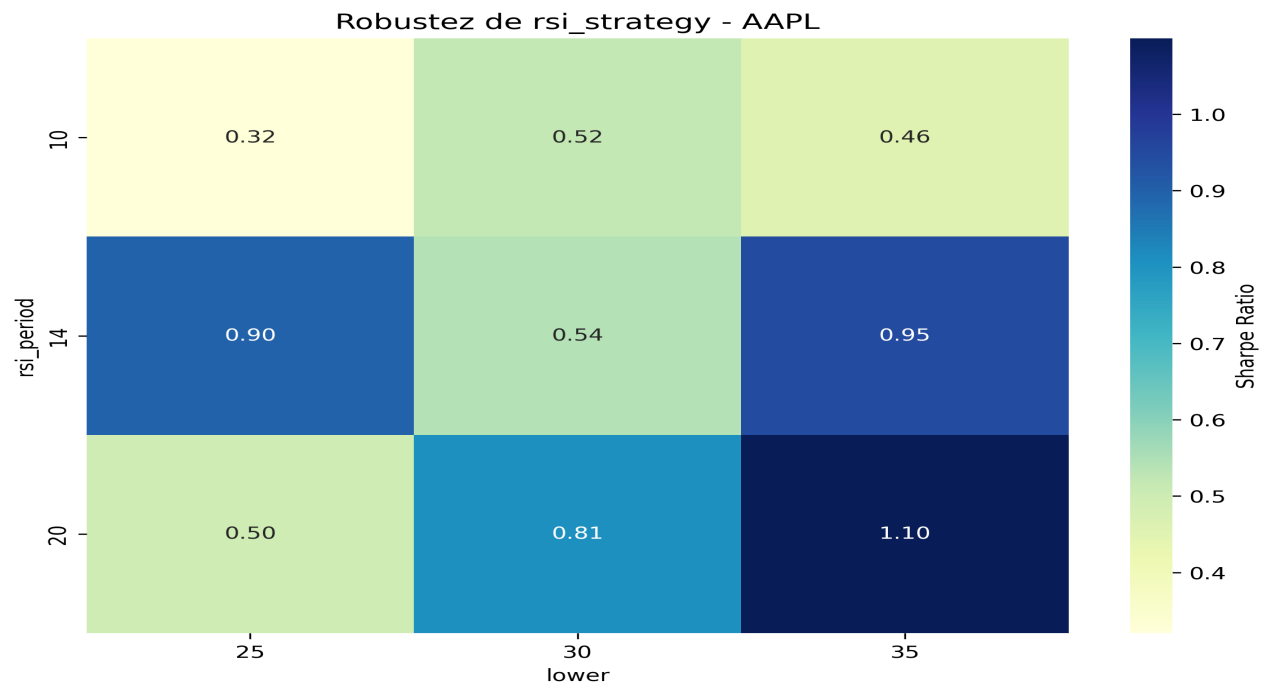

Figura 3. Análisis de robustez de la estrategia RSI.

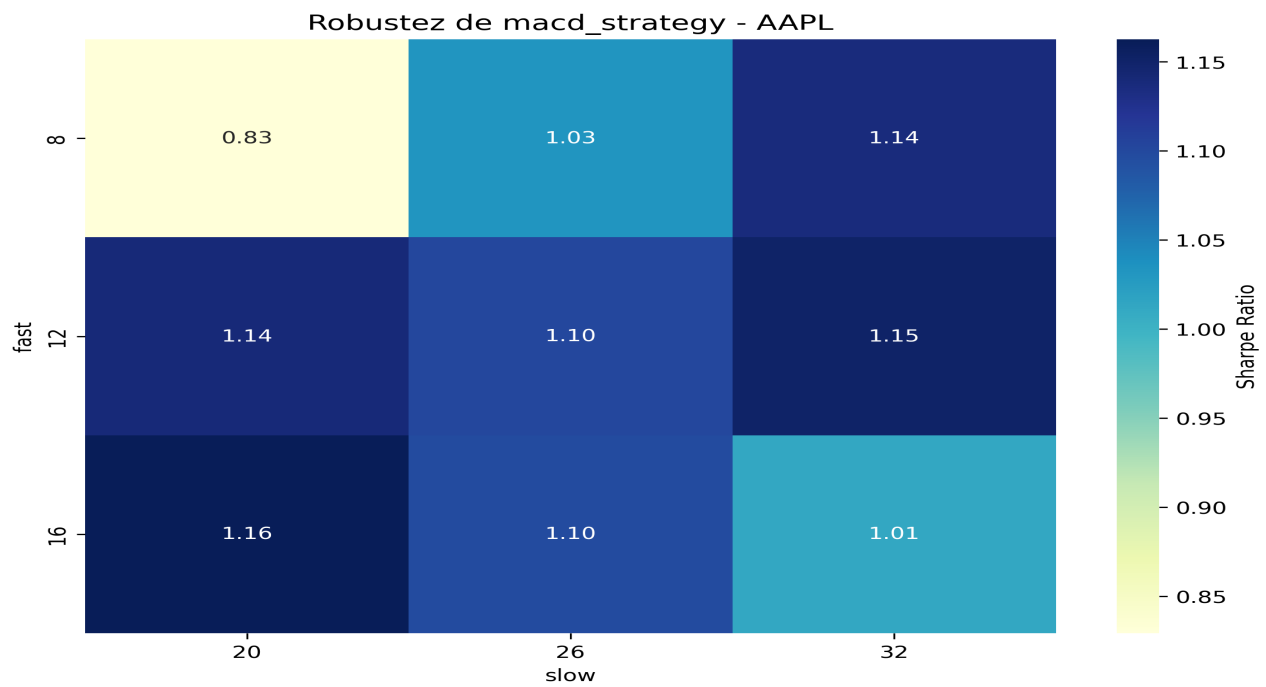

Figura 4. Análisis de robustez de la estrategia MACD.

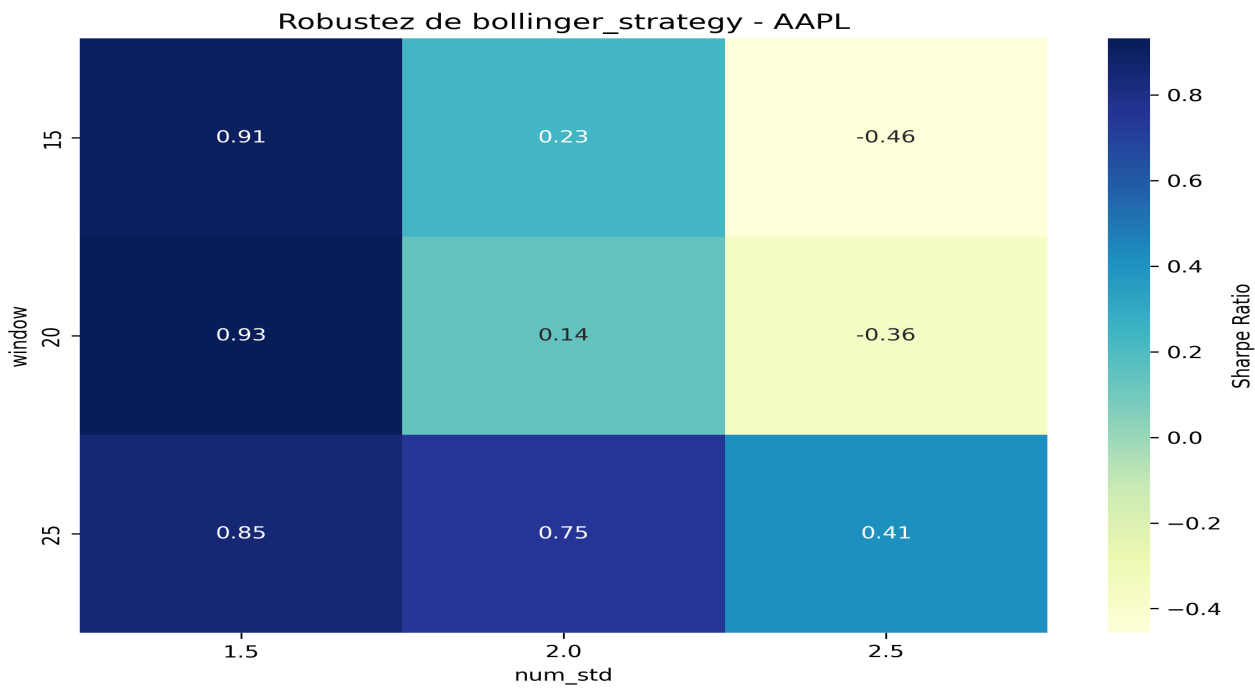

Figura 5. Análisis de robustez de la estrategia Bollinger Bands.

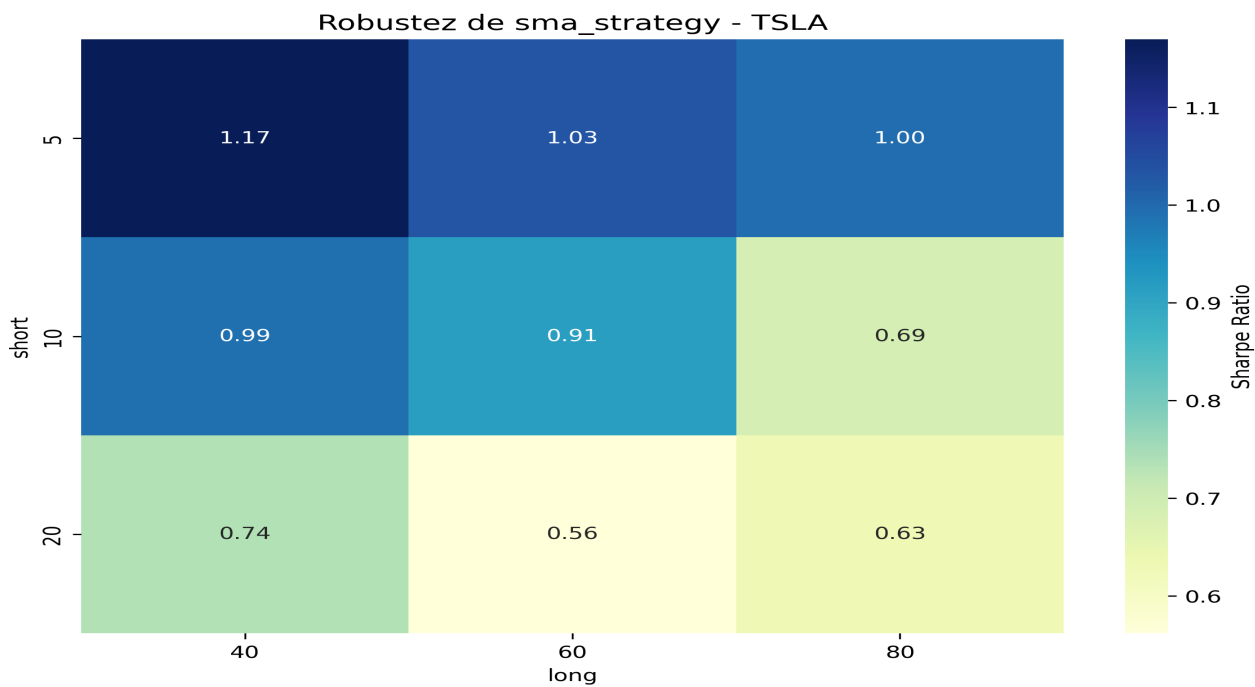

Figura 6. Análisis de robustez de la estrategia SMA.

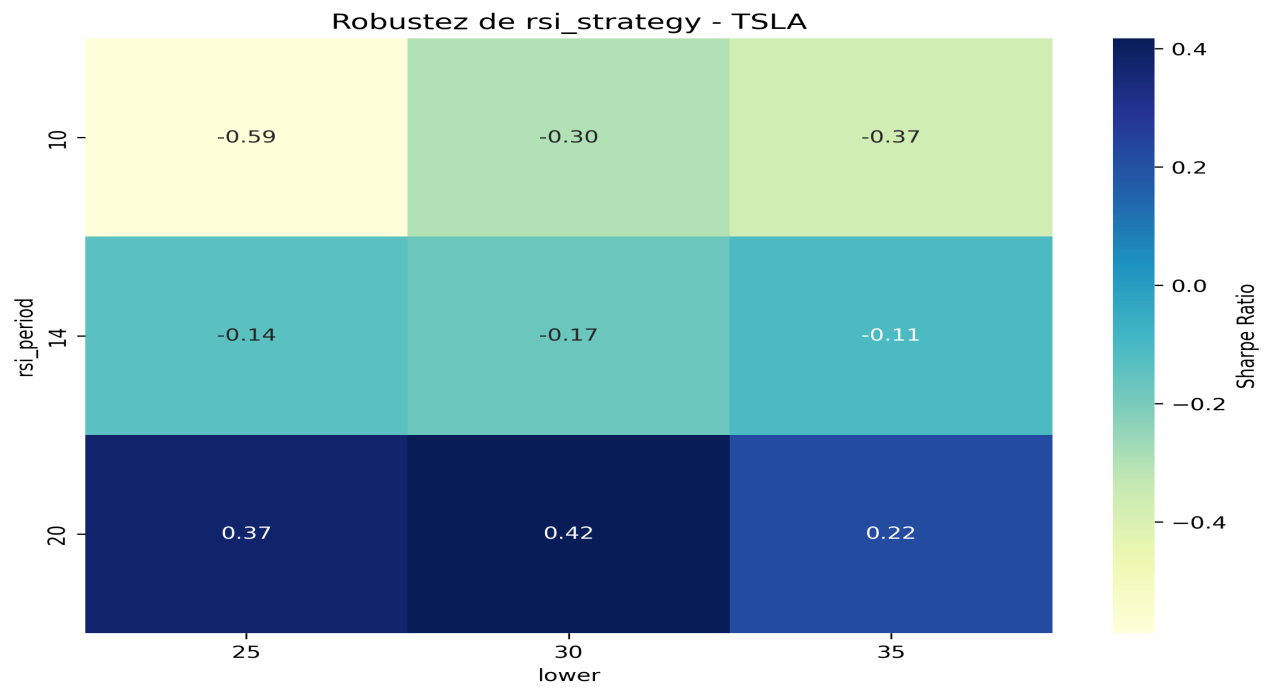

Figura 7. Análisis de robustez de la estrategia RSI.

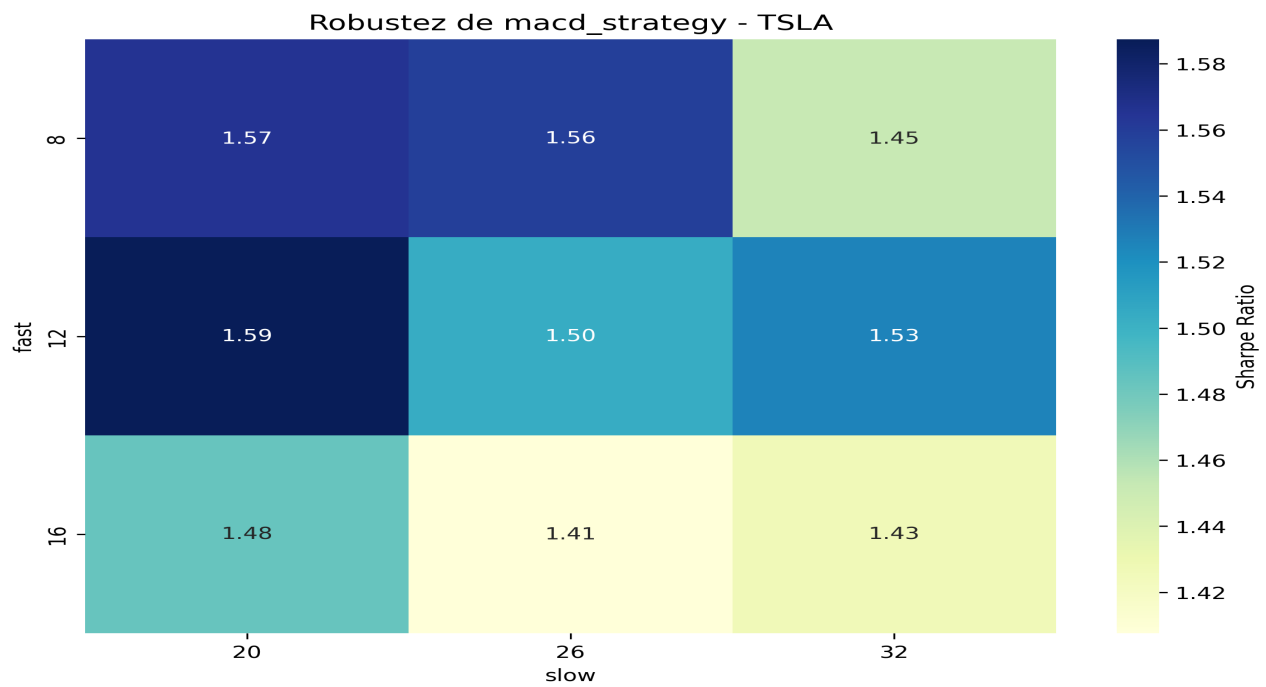

Figura 8. Análisis de robustez de la estrategia MACD.

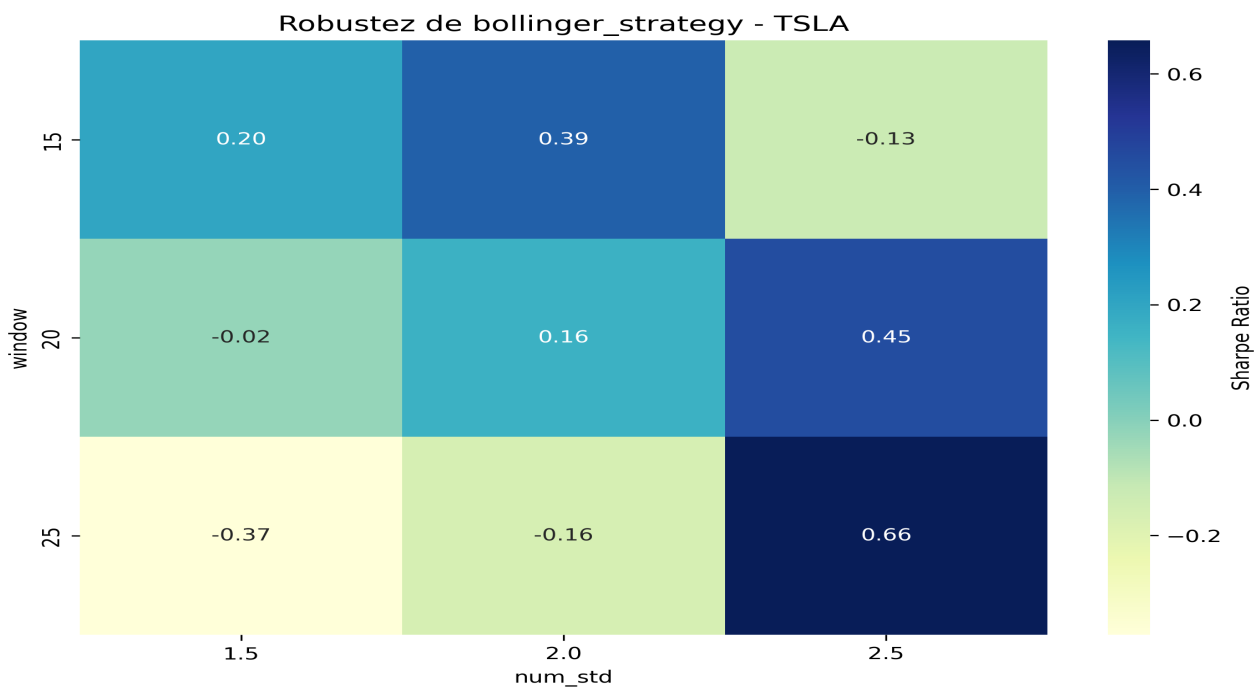

Figura 9. Análisis de robustez de la estrategia Bollinger Bands.

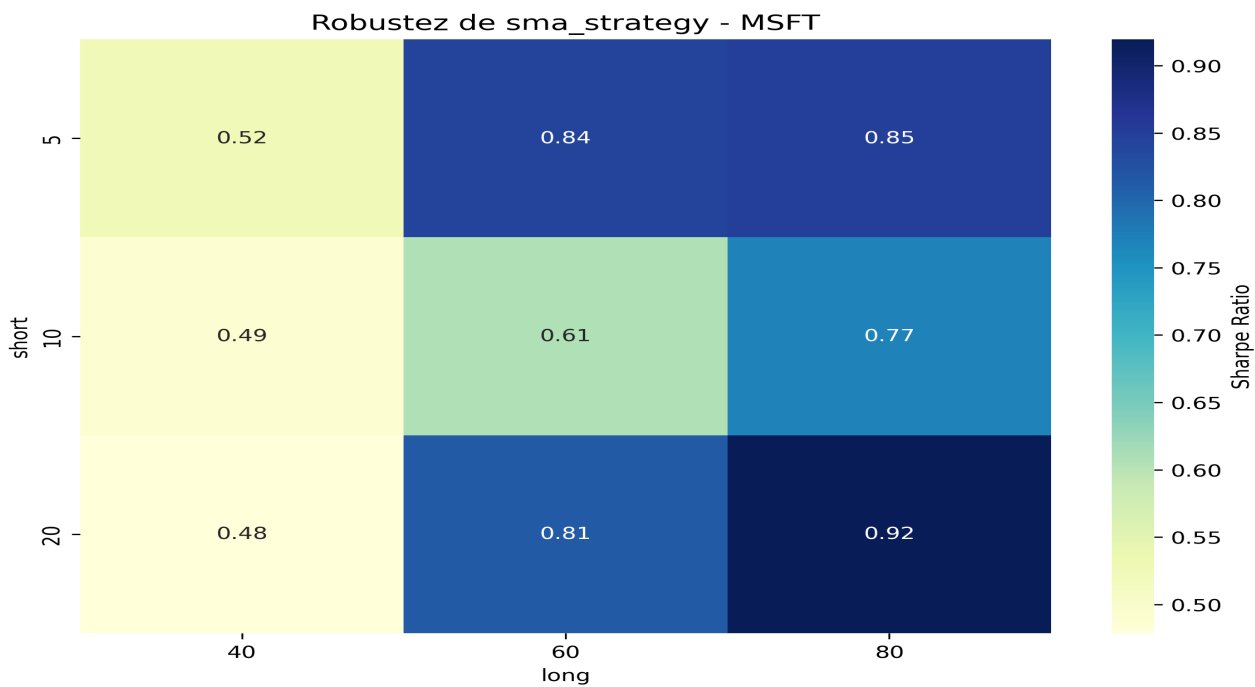

Figura 10. Análisis de robustez de la estrategia SMA.

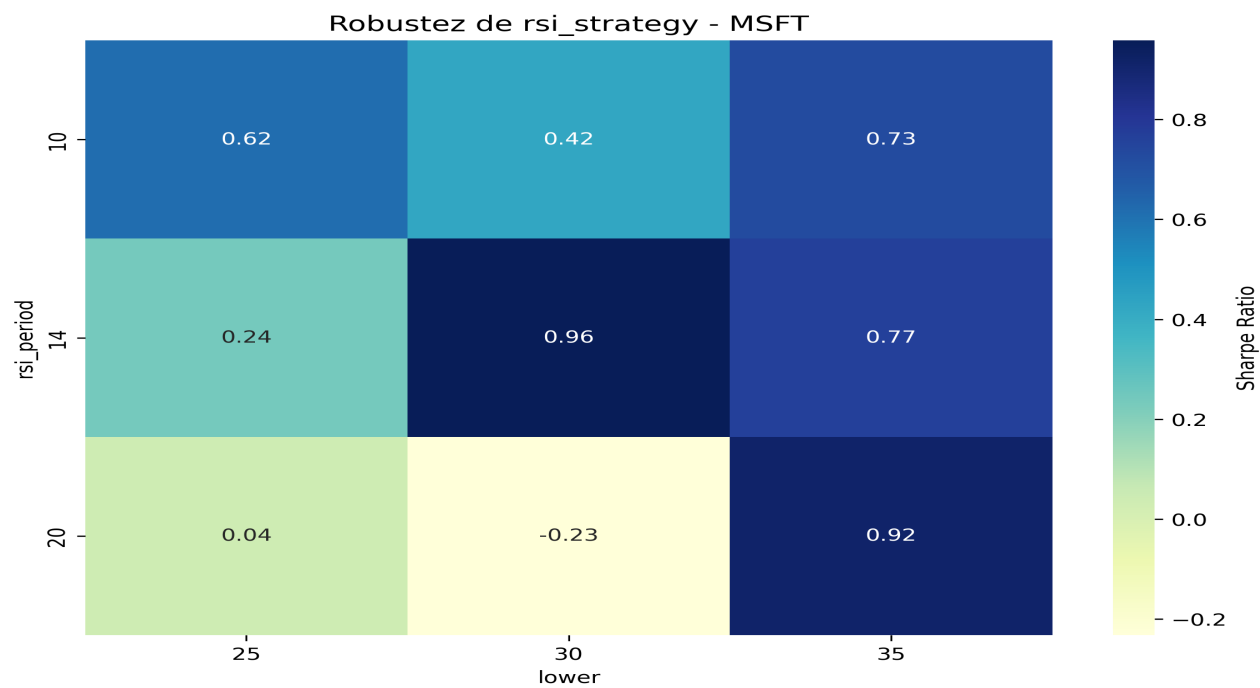

Figura 11. Análisis de robustez de la estrategia RSI.

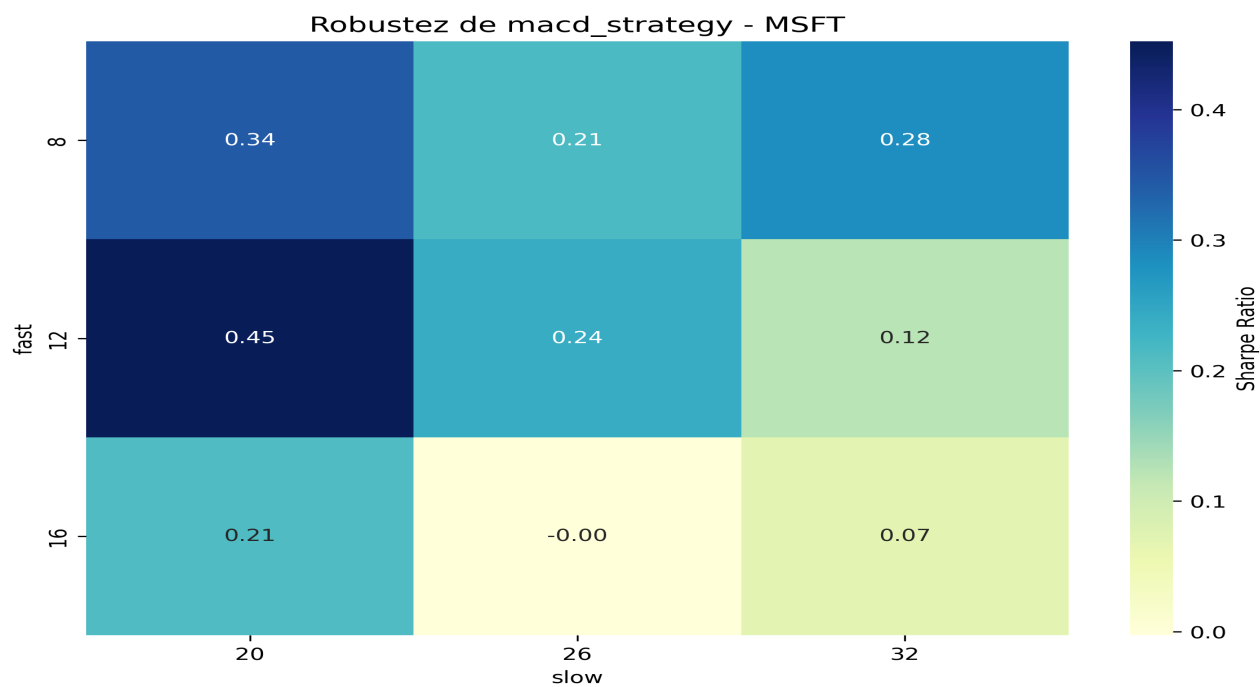

Figura 12. Análisis de robustez de la estrategia MACD.

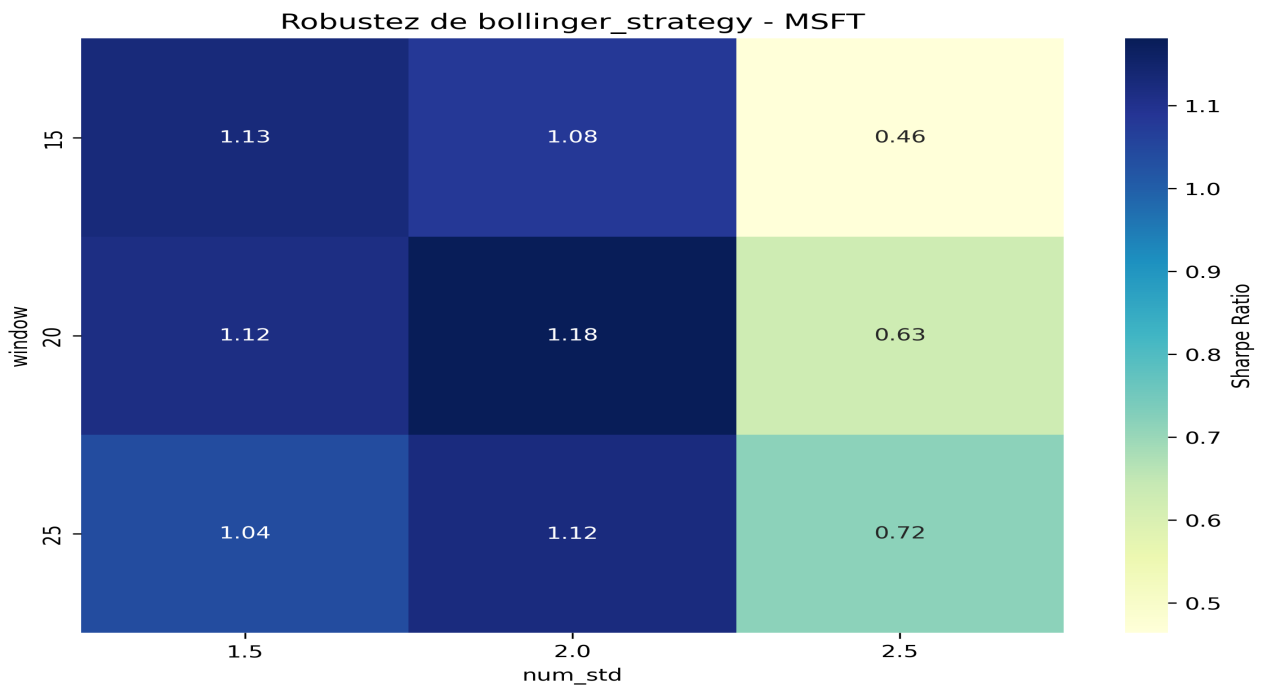

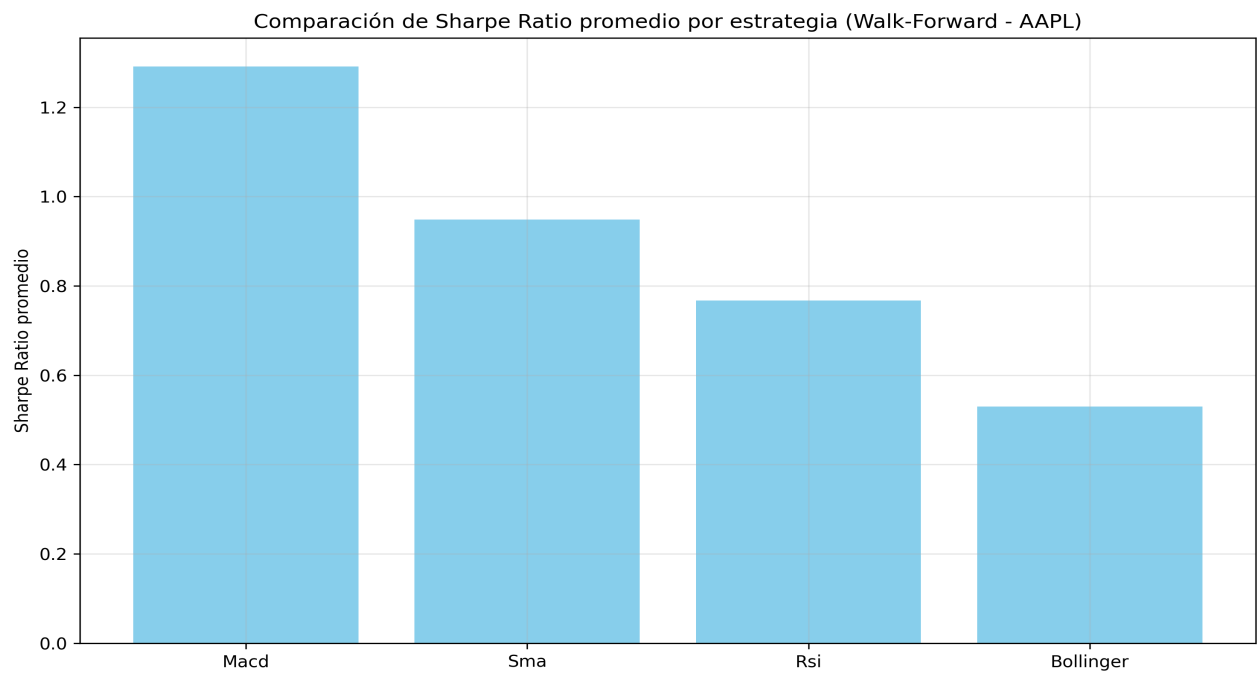

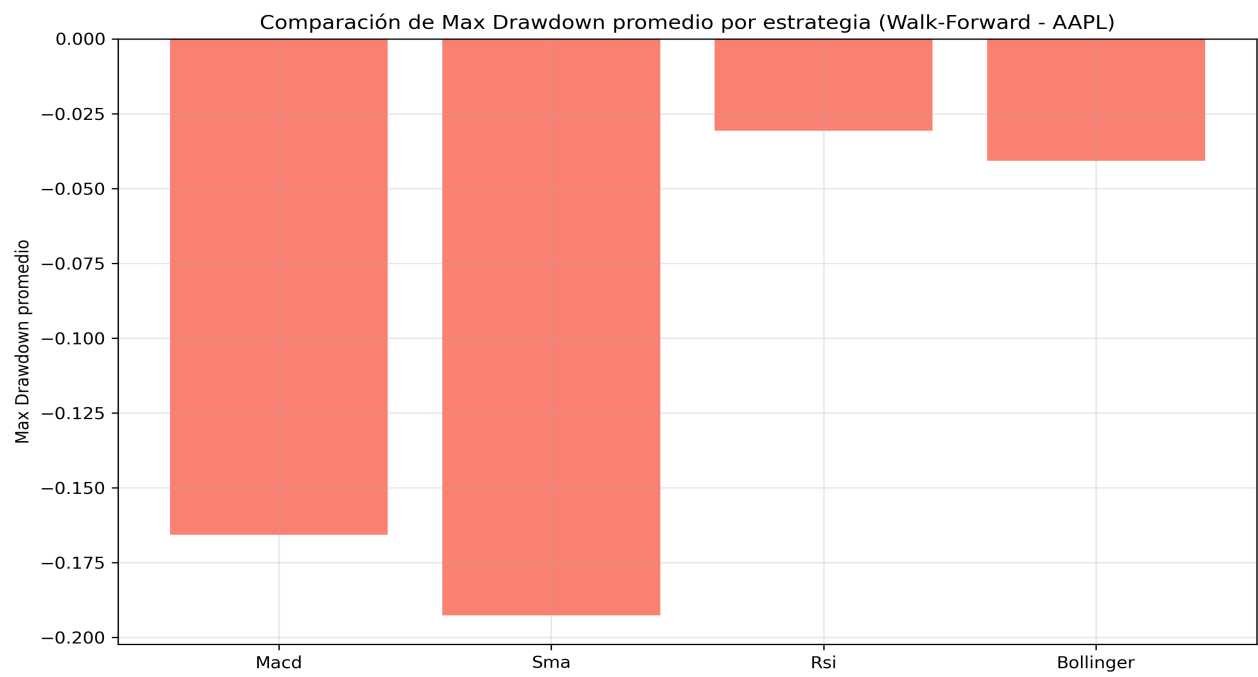

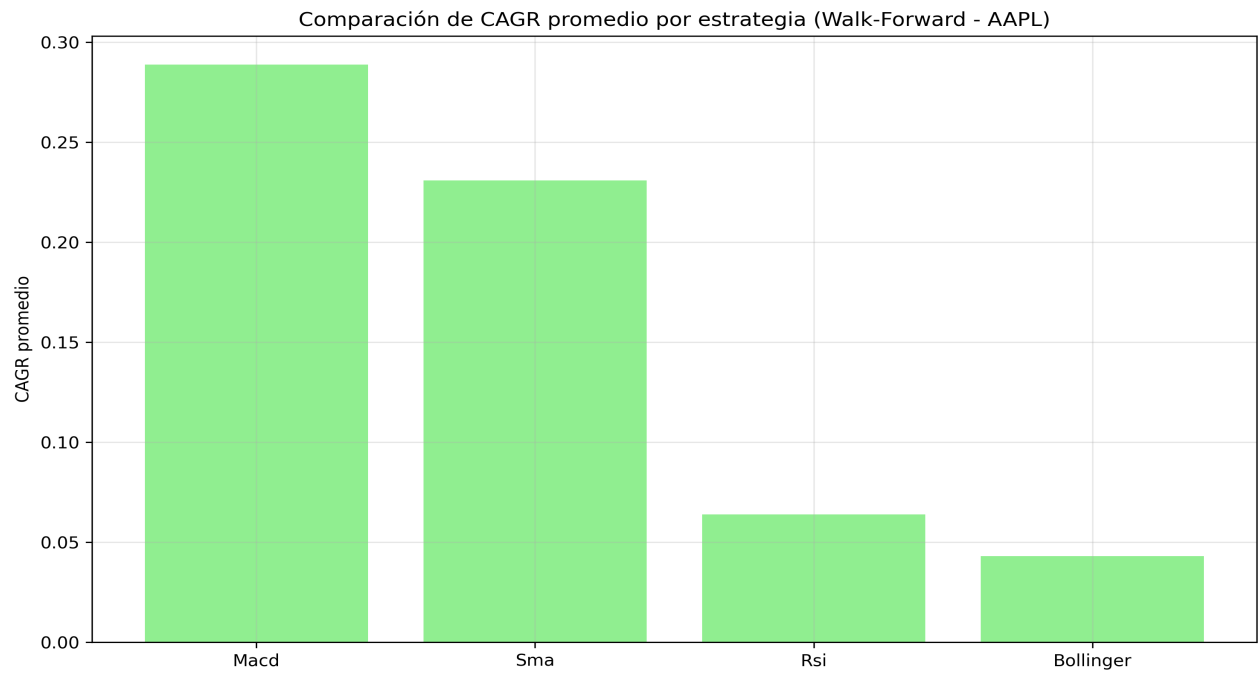

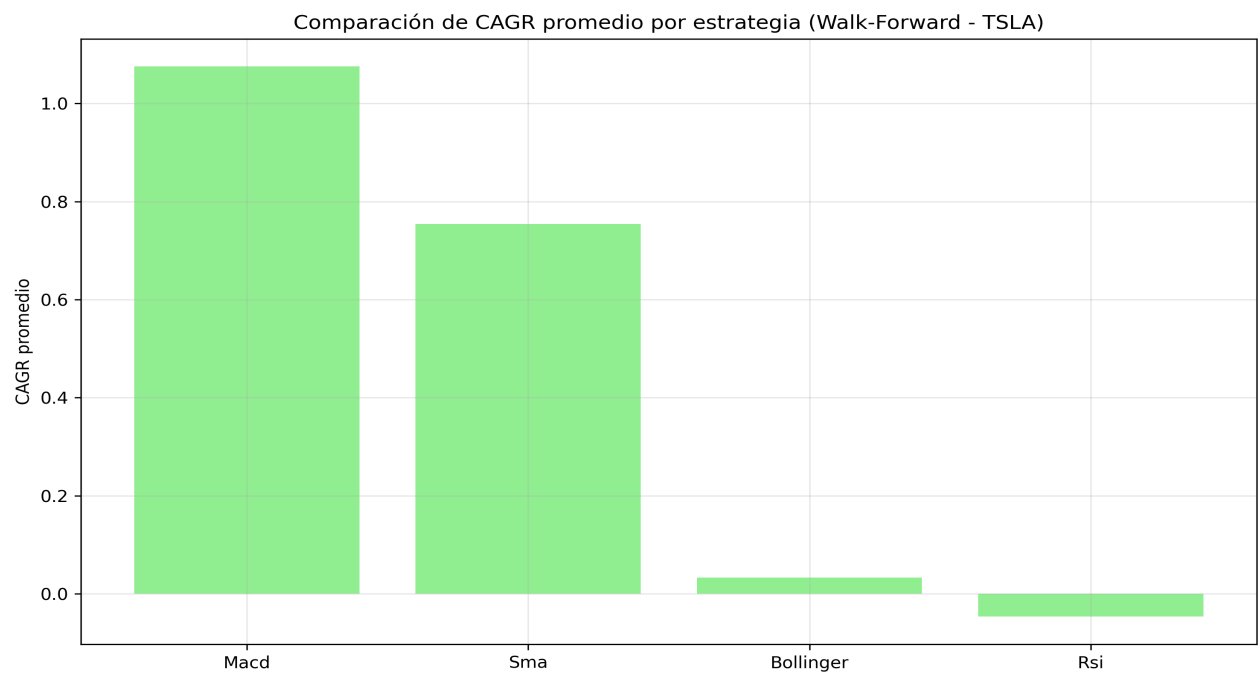

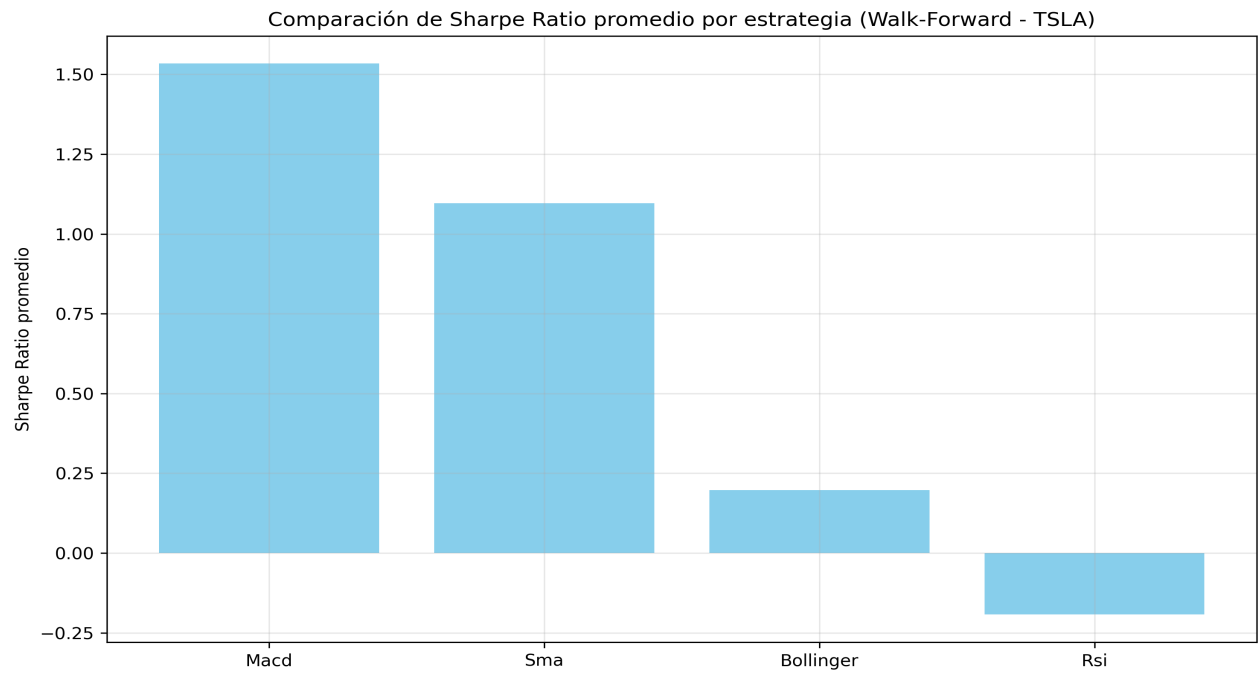

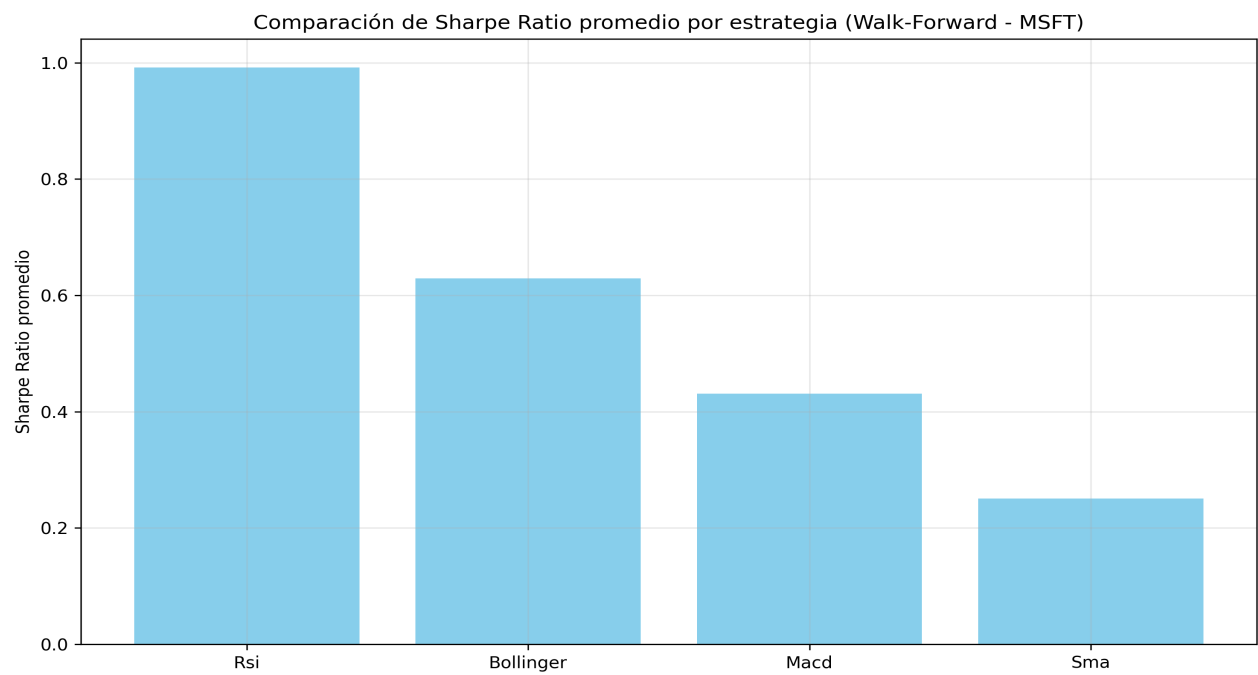

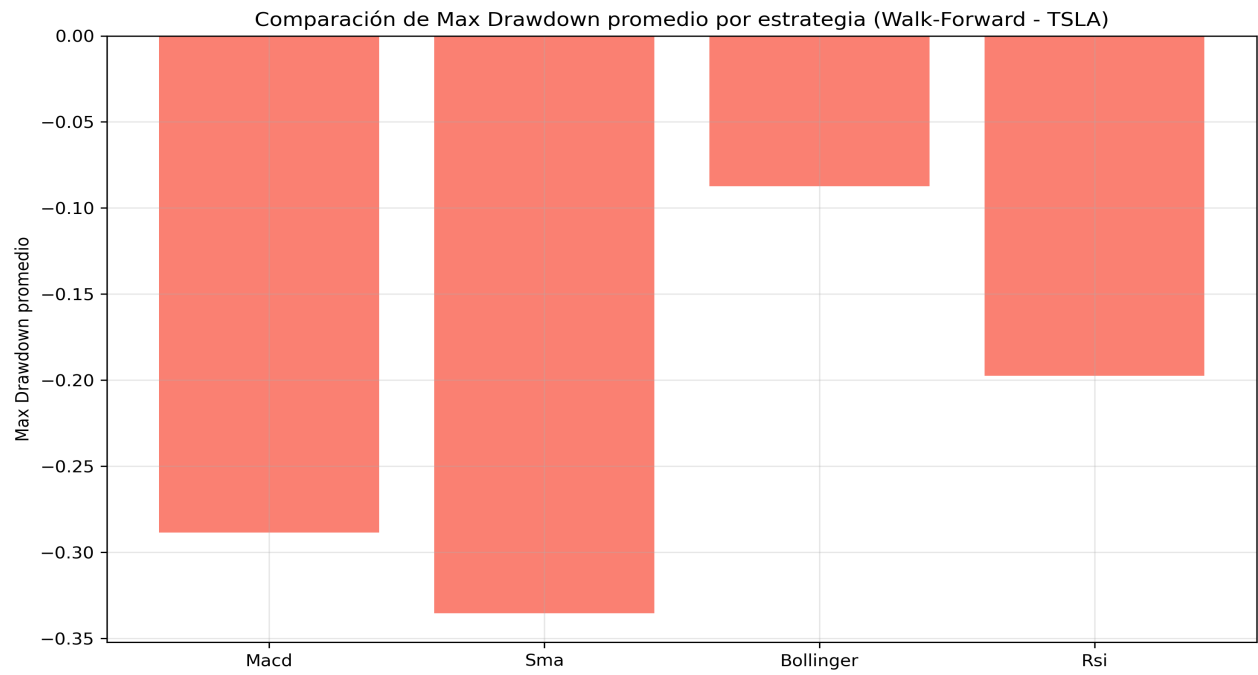

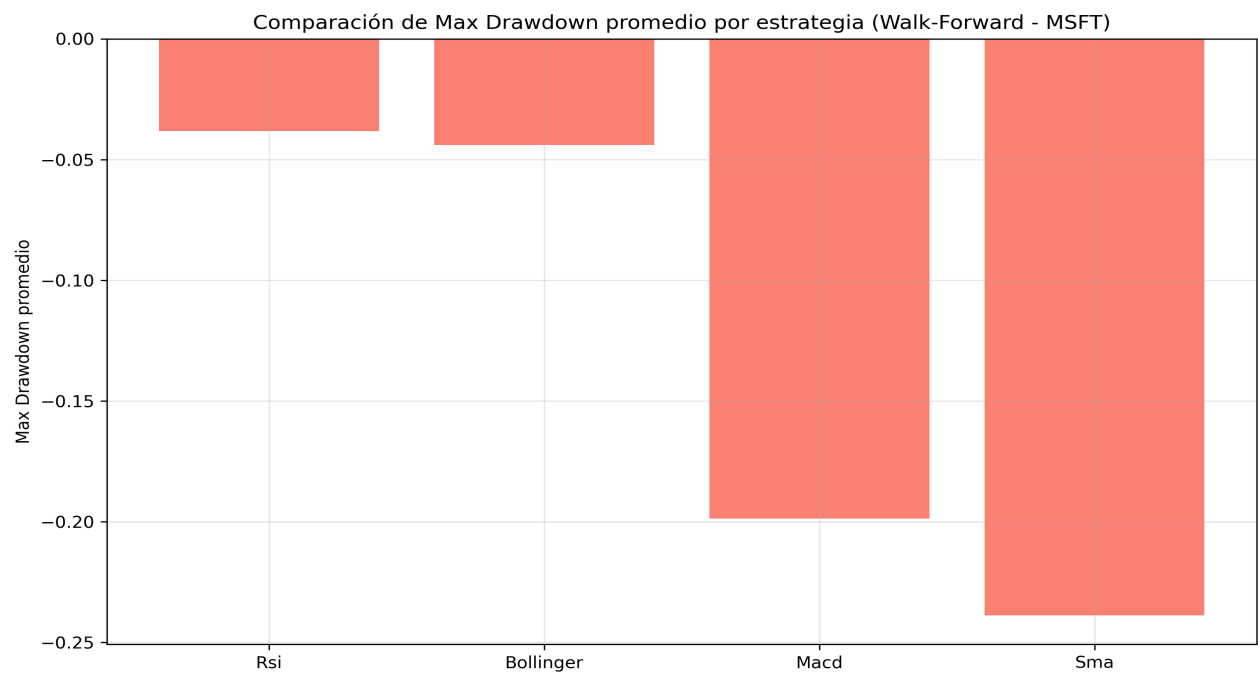

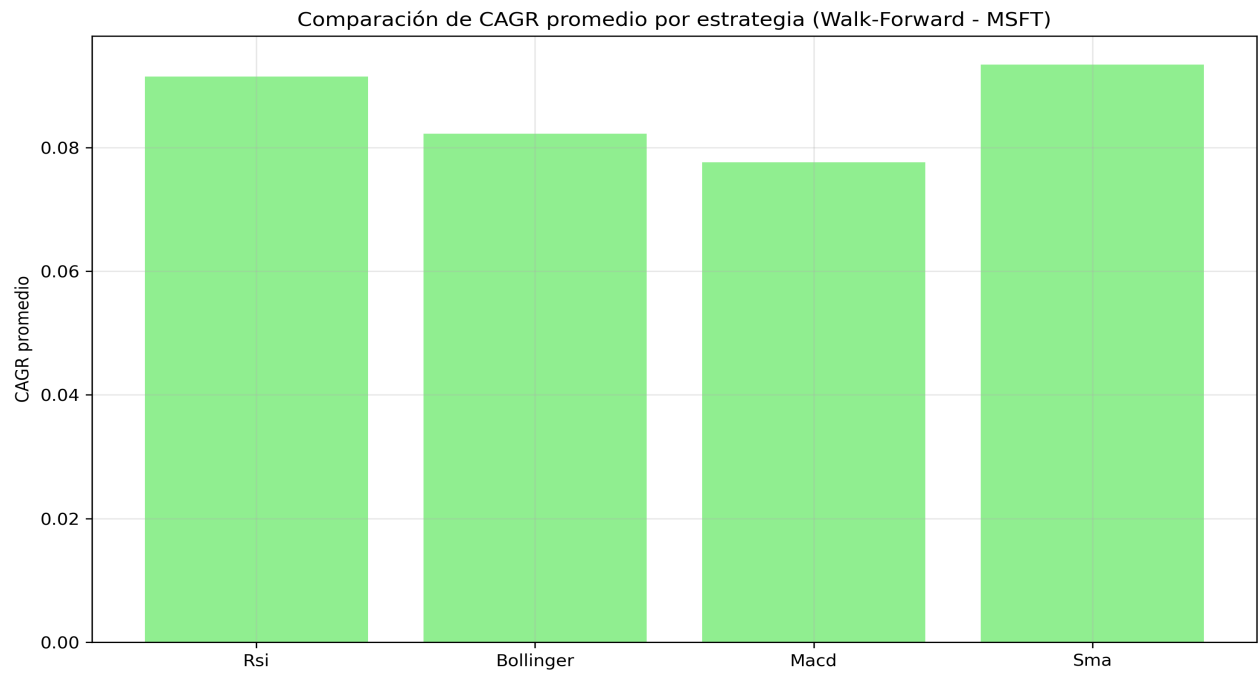

Figura 13. Análisis de robustez de la estrategia Bollinger Bands.

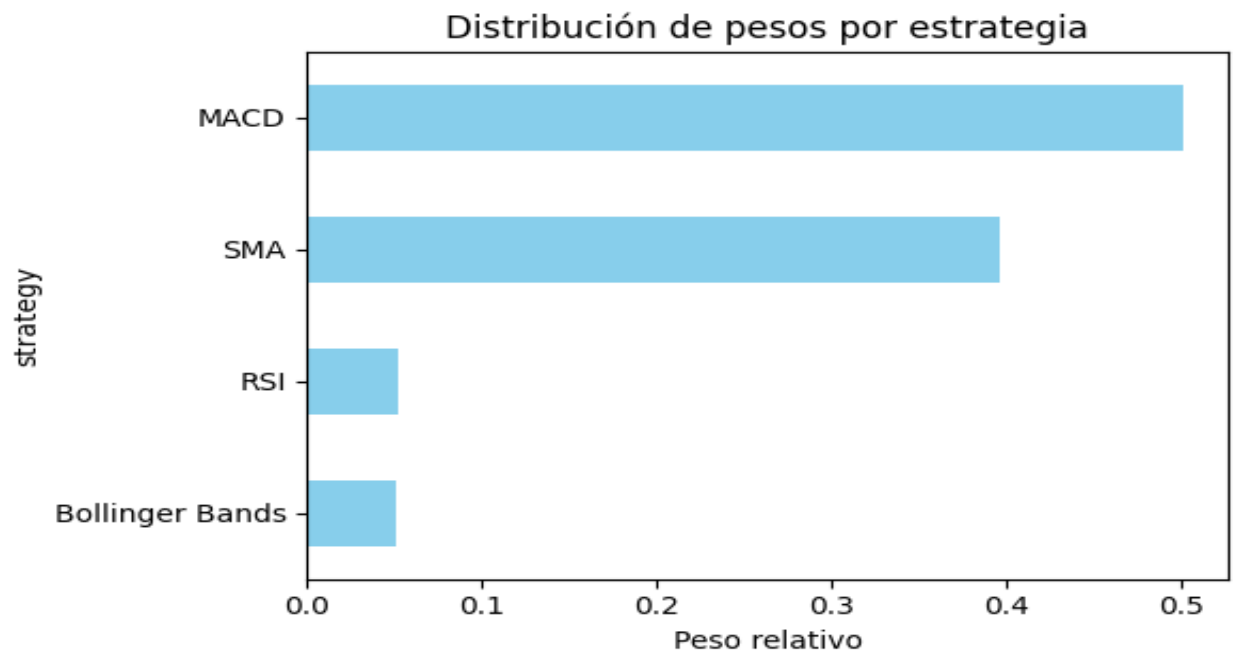

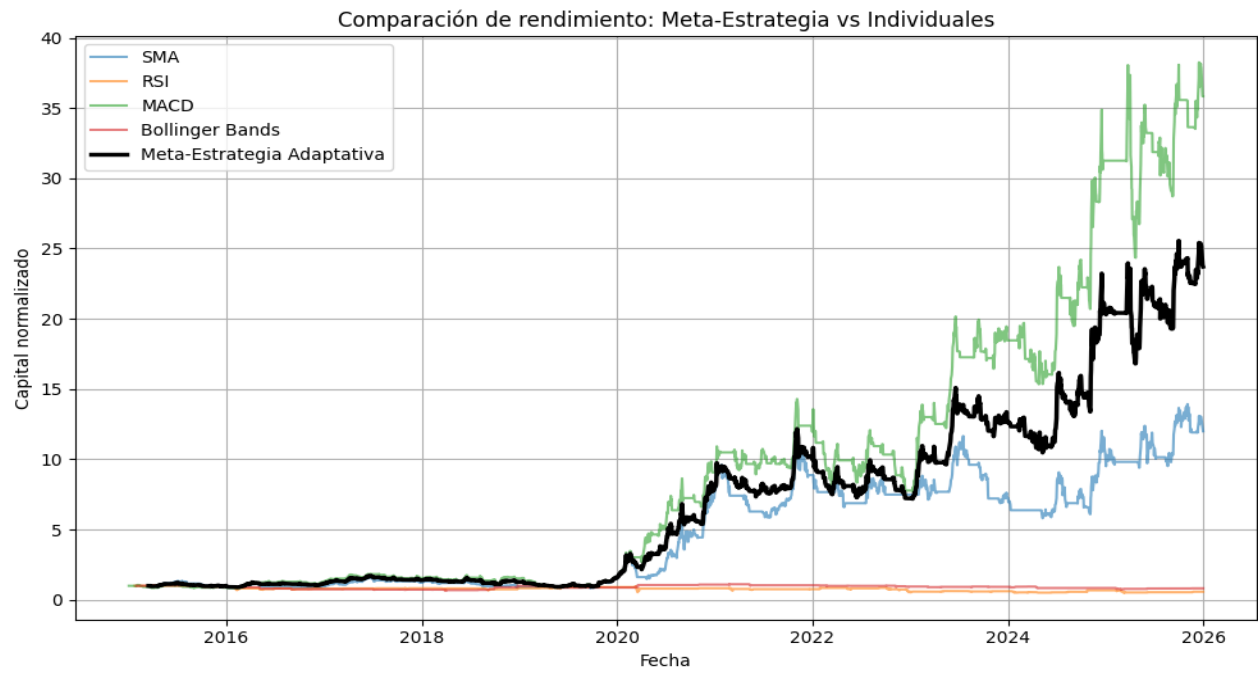

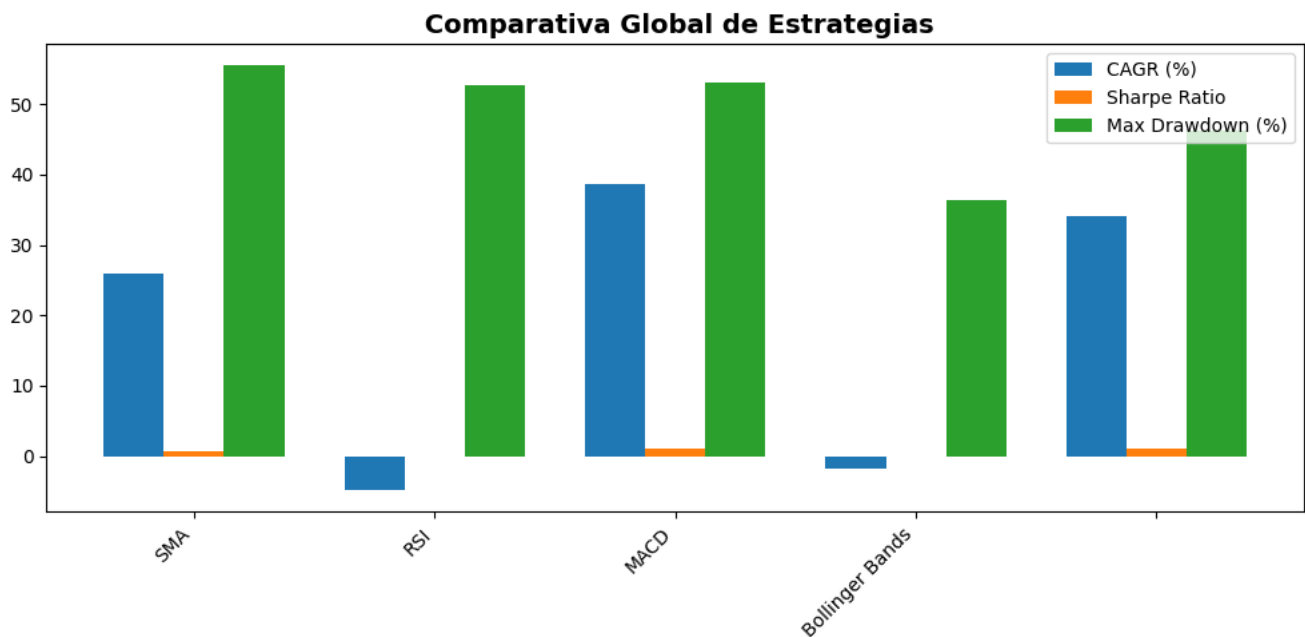

Comparativa Global de Estrategias

Esta gráfica muestra la comparación de las métricas clave de rendimiento entre todas las estrategias evaluadas, incluyendo la Meta-Estrategia Adaptativa. Permite visualizar el equilibrio entre rentabilidad (CAGR), eficiencia (Sharpe Ratio) y riesgo (Drawdown).
